MADE IN SWEDEN

Innovations for generations with the forest as the foundation

During the latter half of the 19th century, the forest industry developed in Sweden, first the sawmill industry and later the paper and pulp industry. This meant that the forest had a completely different meaning for the business community and for the construction of new structures.

Sunfab's founder, Eric Sundin, started a factory in Arbrå in 1925, which made skis under the name Sundins. The Swedish military became aware of the innovative ski manufacturer, and began to buy large amounts of skis, which helped the company grow rapidly. After a fire in 1927, the ski factory was moved from Arbrå to Hudiksvall. There, the company quickly outgrew its premises. In 1936 Eric Sundin bought Barnängen's old chemical factory at Hudiksvall Harbor, where production was moved to.

To unload birch logs used in production was a tough job for the workers. To make the job easier they created the world's first mobile hydraulic crane. It was driven by the truck engine and could go up, down and to the sides. This is how HIAB was born, a company that would revolutionize cargo handling across the globe. Over the next few years, they continued to develop the product, and soon new technology was needed to give the cranes higher performance. In 1954, the first hydraulic piston pump for trucks was created, which was renamed Sunfab. They built their own machines to manufacture the pumps.

From skis to pumps

In the 1960s, Sundins was one of the world's largest ski manufacturers. In addition, the demand for Sunfab pumps and HIAB cranes increased steadily. It became too much for one family to deal with themselves. Therefore, HIAB was sold to an investment company in 1965. However, Eric Sundin continued to work at Sundins Fabriker until he passed away in 1975.

In the 1980s, competition from the manufacturers of skis increased throughout Europe, which resulted in Sundin's discontinuation in 1989.

The start for Sunfab

In the early 1990s, Sundins Fabriker changed their name to Sunfab Hydraulics AB and focused entirely on truck hydraulics. In addition to developing the well-known SC pump, a hydraulic motor was also developed. The investment over the years on product development and marketing has had a positive effect. From the approximately 8,000 pumps delivered in the late 80's. Today, the number has grown to over 40,000 pumps and motors per year.

From Hudiksvall to the entire world since 1925

SUNFAB PRODUCT HISTORY

1954 PUMP A2-19

1956 PUMP B2

1963 PUMP G2

1970 PUMP 17S-SERIES

1973 PUMP SR/SRD

1980 PUMP DM-SERIES

1987 PUMP S-SERIES

1993 PUMP SL-SERIES

1994 PUMP SC

1996 MOTOR M-SERIES

1998 PUMP SC 75/75

2000 MOTOR SCM-SERIES

2000 PUMP SVH

2008 SCPD 56/26

2010 MOTOR SCM M2

2012 BY-PASS VALVE/SBP

2012 PUMP SVH 130

2014 PUMP SCPD 76/76

2014 PUMP SAP-SERIES

Export to over 60 country's

Today, Sunfab is a well-known brand all over the world. Approximately 90% of manufacturing is exported to around 60 countries around the world.

The Sunfab Group's subsidiaries are located in Germany, France, UK, Spain and the United States.

For Sunfab, it is important to be a local manufacturing company. It is the guiding principle that drives the company's continued development and innovations. Therefore, all development and manufacturing takes place in the company's state-of-the-art premises in Hudiksvall. The new factory, which opened in 2006, is set wall to wall with the old factory, that once was the world's largest ski factory. Now, over 90 years after the start, we still manufacture and operate in Sweden.
